vous invitent au

Power of i Roadshow

Mercredi 3 novembre 2010

IBM Genève

Dear members of COMMON Romandie, dear friends,

It is a pleasure to invite you to this half-day of "**Power of i Roadshow**", which enables us to receive TIM ROWE in Geneva during his IBM European tour.

TIM ROWE has been working with IBM for over 20 years within the IBM i family in Rochester, Minn. He spent many years working on the Work Management portion of the operating system before moving into Web based middle ware on IBM i. He spent over 9 years developing the Web infrastructure for the IBM i operating system. Including HTTP Server, Web Administration GUI interface, WebSphere Application Server -Express, Integrated Web Application Server for i, and Web Service Server for i. He is currently the Business Architect **responsible for Application Development on IBM i**.

IBM i Application Development Overview

Application Development on IBM i is comprised of a wide array of technologies and products. Learn about the new feature and products to build, manage, and control applications on IBM i. We will go over the great new enhancements from the Rational team, including the new Rational Developer for Power, updates to the RPG language, and the new Rational Open Access for RPG. We will also explore some of the Web based infrastructure on IBM i, WebSphere Application Server, the Integrated Web Servers Server, an update on Java and the new Workload Capping support.

IBM Application Runtime Expert for i

IBM Application Runtime Expert for i (ARE) simplifies the management of applications and their runtime environment. With today's complex systems and software stacks, there are many things that have the potential to affect the performance and operation of an application. In order for your applications to deliver optimal performance and results for your end users, the application and its runtime environment must remain consistent. This can mean managing many different environment settings, files, directories, user authorities, property files, systems values, network settings, plus other system settings that directly effect your application. Learn how the ARE simple-to-use GUI interface automates the management of an application's runtime environment. ARE can speed recovery from issues impacting your end users, improving service delivery and client satisfaction, while reducing the overall cost of application management.

Looking forward to meeting you at this **exceptional event,** we are thanking you in advance for your participation and address you, dear members and friends of COMMON, our best regards.

For COMMON Romandie

Pascal KOUMROUYAN   Jean-Charles FINIDORI
Event manager   President of COMMON Romandie

A G E N D A

Dès 08h30   **Welcome**
IBM is on the first floor.
Please annonce yourself at the reception.
Coffee & croissants

09h00 – 9h05   **Introduction**
Pascal KOUMROUYAN

09h05 – 10h30   **IBM i Application Development Overview**
Presented by Tim ROWE from IBM Rochester
All you need to know about the new features and products to build, manage, and control applications on IBM i

10h30 – 11h00   **Break**

11h00 – 12h25   **IBM Application Runtime Expert for i**
Presented by Tim ROWE from IBM Rochester
Learn how using IBM Application Runtime Expert for i (ARE) simplifies the management of applications and their runtime environment

12h25 – 12h30   **Conclusion**
Pascal KOUMROUYAN

12h30 – 14h00   ***Buffet offered by IBM***
